

If you can listen to 4 songs in 12 minutes, how many songs can you listen to in 18 minutes?  
(Assume each song is the same length).

Draw a picture that shows how you can find the answer from above or shows your thinking.

Plot the points (6, -4) and (-3, 9).

Simplify.

$$3\frac{2}{5} + 1\frac{1}{4}$$

$$5\frac{1}{3} - 2\frac{2}{5}$$

$$\frac{3}{8} \times \frac{12}{15}$$
